

CERTIFICATE OF COMPLIANCE

SECOP

European Regulation EC 1907/2006

With reference to the REACH directive we can inform our customers that there are no SVHC substances or substances from the candidate list used in Secop products that require information to the market.

We are aware of the obligation to proactively inform our customers should a substance used by Secop, in excess of the limit value, appear on the candidate list.

We are also aware of the obligation to the requirement of preregistration of chemicals, but as Secop is neither a manufacturer nor an importer of chemicals this provision does not pertain to our business.

Further we can inform that all Secop plants are ISO 14001 certified, in which compliance to national and international environmental legislation is part of the certification procedure.
