

Secop Single Pack Boxes

Our new Single Pack boxes (see Figure 1) feature a new layout with a label that is visible from two sides (see page 3). Different box sizes are available depending on the compressor platform.

Original Secop Single Packs are available through the Secop authorized distribution network that can be found on our website. Secop recommends the original Secop branded Single Pack to guarantee the quality and reliability you are looking for.

Single Pack Box without EPS

The corrugated cardboard box and its inner corrugated cardboard parts serve as a stable cushion for any product it carries during shipping and handling. It is easy to recycle, biodegradable and therefore sustainable. The new Single Pack Box design does not contain any EPS (expanded polystyrene). The light weight and flexibility are further advantages of this packaging solution (see Figure 2).

Secop Single Packs Online Selection

Secop has recently released an update of the online Product Selector tool, with a new section dedicated to Single Pack code numbers.

The new section is available in the top part of the Product Selector, next to the "Application", "Performance", and "Datasheet" sections.

This makes searches in our database directly using the Single Pack code numbers as well as the bare compressor code numbers possible. Secop offers more than 500 different Single Pack options, covering all the different market needs across the regions.

Users can download a full "Documentation" including Single Pack content, a compressor Data Sheet (technical data and performances), and Instructions (mounting) by clicking on the PDF icon.

Thanks to this new feature, identifying the right Single Pack needed is now faster and easier, thereby improving the customer experience and simplifying the search.

Single Pack Contents:

- Compressor
- Starting Equipment
- Mounting Accessories
- Instructions

Secop Boosts Single Packs Pallet Load

Thanks to the previous listed changes, Secop will be able to increase the volume per pallet of Single Pack compressors to provide a better service to our customers.

The load per pallet will be increased from the current 42 units to 56 units to optimize loading with less empty space in containers and trucks while also improving the timing of load preparation in our factories.

Due to container weight limitations prescribed by international regulations, Secop reserves the right to use the maximum quantity of 42 units per pallet where necessary. More details will be agreed at the time of shipping with Secop's delivery administrators (see Figure 4).

Compressor Series Load Increase per Pallet

Packaging groups:

- P-Series and BD-P Series (42 units to 56 units)
- K-Series and KL-Series (42 units to 56 units)
- N-Series and F-Series (42 units to 56 units)
- D-Series and T-Series (42 units to 56 units)
- S-Series (42 units to 56 units)
- G-Series (24 units to 27 units)
- SC Twin (6 units to 12 units)

Packing Reinforcement

To ensure safe transport on pallets with higher stacking heights, Secop uses cardboard corners on the top and also on the vertical sides, together with plastic strapping in both directions. (see Figures 3 and 4)

Tests

In accordance with internal packaging testing standards, Secop conducted several transportation, rigidity and dragging tests. To obtain the most accurate results, compressor series with the highest weight on the pallets were selected. The pallets were secured with cardboard corners, plastic film and double strapping across the pallet (see Figures 3 and 4).

Rollout Date

Current packaging will be phased out and new packaging will be gradually implemented starting in April 2023.

Please note, Secop may ship compressors in both packaging versions during this transition phase.

For any questions, please feel free to contact your personal Secop representative.
