

NLE and NLV Compressors Angle of Suction Connector Change

In order to standardize the connector setup, we will be changing the angle of the suction connector for the NLE (NLV) compressor line.

Currently, the angle is 45° (see figure 1). In the future, it will be reduced to 15° (see figure 2). In addition, the connector will be shortened by 3 mm.

This change in production will take place in two steps:

All 220-240 V versions starting from the end of September 2017.

All 115 V versions starting from the end of April 2018.

Due to the availability of warehouse stock of the different compressors the change will be smooth.

To manage the stock, the pallets with the new connector will be marked with an additional green label.

Please get in touch with your local Secop contact person for further information.
