

Phase-out of BD350/350GH Twin Compressors

Secop would like to announce that the DC twin compressor models BD350/350GH will be discontinued.

Secop is the leader in the DC compressor market due to its proven capacity to develop high quality and top-performance products.

We are currently going through the process of optimizing the DC compressor portfolio. This has led us to decide to discontinue our 12 and 24 V DC BD350/350GH twin compressors due to market and technological reasons.

Phase-out date and code numbers

The following code numbers will be obsolete from August 31, 2017:

102Z3017 - BD350/350GH 24V DC
102Z3018 - BD350/350GH 12V DC

Replacement solution

There are no direct replacement compressors with the same cooling capacity.

We recommend setting up the cooling circuit so that evaporator and condenser are split into two circuits, using a BD350GH 12 or 24 V DC for each circuit to obtain same capacity as using BD350/350GH twin.

Further info

Please get in touch with your local Secop contact person for further information.
