

## Automotive Electronic Unit 101N0600 Discontinued

When the electronic unit 101N0600 was launched, it was an excellent electronic unit with significantly improved EMI and leakage current compared to existing products.

### Alternatives

In 2014, Secop introduced its new series of electronic units including the 101N0650. It offers an even better price-performance ratio, can drive even bigger compressors, and has other advanced features such as a full communication interface including flexible parameter adjustments, alarm- and event-logs.

### Restrictions

101N0650 can be used in an identical way as 101N0600, yet it does not have a lamp output and can drive fans only up to 5 W.

5 W fans are sufficient for almost all applications. Constant lamp voltage is typically no longer necessary since wide range LEDs are common nowadays.

### Timing

Secop is discontinuing the 101N0600 electronic unit code number by the end of 2018.

Final orders can be placed in July 2018.
