

Fixed Speed (FSD) Electronic Unit 101N2600 Discontinued

The 101N2600 electronic unit is used for fixed speed drive with BD1.4F-FSD compressors. When the 101N2600 electronic unit was launched with the BD1.4F-FSD compressor, it featured a unique combination of low cost and small size.

Alternatives

In the meantime Secop has expanded its portfolio with new versions.

For automotive customers, Secop recommends using the 101N2100 electronic unit in combination with the BD1.4F-VSD.2 compressor 109Z0204. This offers full flexible variable speed drive with the benefits of improved COP, reduced noise, and extended battery lifetime.

For portable box customers, Secop recommends changing the compressor and electronics to the dedicated PBC-1.4 product range with the code number SBC50N30. The portable box compressor (PBC) range is targeted exactly for these applications with tailor-made products.

Timing

Secop is discontinuing the 101N2600 electronic unit code number by the end of 2018.

Final orders can be placed in July 2018.
