

## Secop "PBC" Compressors

### Electronic Unit Colour Change from White to Charcoal Grey

The white housings of the electronic units mounted on Secop "PBC" compressors (PBC-1.4, PBC-2.0 and PBC-2.5, see figure 1) easily show obvious traces of dirt, which are hard to remove when assembled in customer production lines.

In addition, most customers felt that the white housing looks strange in their cabinet due to the obvious contrast to the dark cabinet.

In order to meet customer requests, we have changed the color to charcoal grey (see figure 2).

The housing material and the printed circuit board will remain unchanged.

Once the current stock has been sold completely, the new electronic units will be used.

Please get in touch with your local Secop contact person for further information.
