

Introduction of improved plug connector in 117- CSR electrical equipments

In order to ensure a solid and safe connection between compressor and electrics, Secop will in the next 2-3 months apply a different terminal box and cluster contacts in the 117- CSR electrical equipments.

This equipment concerns SC compressors. The general size of the new plug is similar to the previous one. In Fig.1 you can see the new terminal plastic box with different shape holes and a smaller size for the Fusite® pin holes.

The cluster contacts (Fig.2), currently used for inside our motor connection to the Fusite®, are now used with the new terminal box.

The reason for smaller holes in the plastic box is to obtain a more straight push on direction. Push-on force is thus slightly increased compared to the old type.

Update of present approvals of 117- CSR equipment is not required and remains unchanged.

New Ownership of Danfoss Household Compressors

Munich-based industrial holding company AURELIUS AG acquired Danfoss Household Compressors from the Danfoss Group, Denmark. The agreement to take over the Danfoss Household Compressors business was signed in July 2010.

In connection with the new ownership Danfoss Household Compressors has changed its name to Secop GmbH. Secop remains a close, long-term partner of the Danfoss Group, as it will continue to sell a major part of its products and solutions, through the Danfoss Group and its sales companies.

With more than 50 years of experience in compressor technology and highly committed employees, our focus is to develop and apply the advanced compressor technologies to achieve standard setting performance for leading products and businesses around the world.
